

Sustainable and quality telehealth Enabled by Hush acoustic pods

A well-designed telehealth workspace solution is an essential investment for any healthcare business looking to deliver quality remote consultations in an easy, efficient and effective manner.

Our Hush range of specialised pods can assist with improved consultation outcomes.

FOR THE HEALTHCARE WORKER

A well-designed telehealth workspace solution is an essential investment for any healthcare business looking to deliver quality remote consultations.

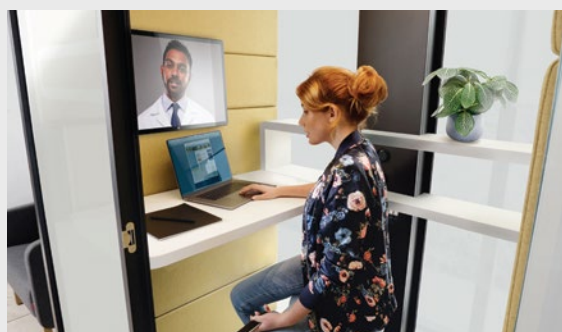

FOR THE PATIENT

Community telehealth pods make it easier for a patient to get to an appointment, reach more of the less digitally connected patients and are flexible to meet the needs of the community.

FOR THE CLINIC

A fast way to gain extra space, using a pod as a consultation or immunisation room improves service delivery and patient experience. Make a positive impact on how basic care in busy locations is delivered efficiently.

FOR WELLBEING

Facilitate an opportunity for people to stay connected by installing a wellbeing pod which connects users in complete privacy with their caregivers, healthcare or other plus family and whanau without them having to leave their location.

Designed for safety, privacy, ease-of-use and portability

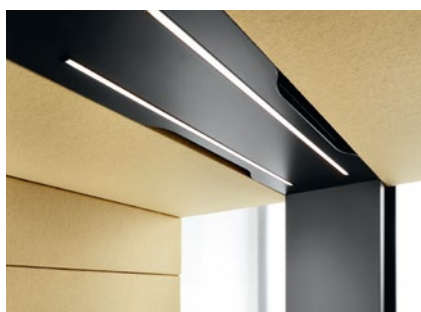

Anti-microbe nanocoating (optional) and efficient ventilation for safety

Booths can be easily relocated to meet the changing needs of a clinic.

Built-in technology ports: Power, USB-A/C and Ethernet module

Motion activated, dimmable LED lighting and adjustable airflow for comfort

Wheelchair accessible pods available

Why choose a pod

Hush pods' great acoustics offer privacy and improved experience for both clinician and patient; and video call systems can be easily set up with the built-in technology ports.

The pods' small footprint means every inch of available space would be well utilised. They can be easily assembled in a few short hours, without the need for building permits or a redesign of the entire floor space.

Having worked through preliminary cost estimates with building project and facility managers, our findings indicate acoustic pod costs are on par with building an internal room into an existing building allowing for equivalent finishes such as acoustic wall panelling, lighting, ventilation etc that the pods include. This along with not requiring a Building Consent and a lack of construction disturbances in a busy clinic ensures a painless addition of extra working space.

Hush pods increase care capacity

Community telehealth pod placements make more accessible appointments possible for patients in rural regions, while expanding care for the less digitally connected. Booths can also be relocated to meet the changing needs of communities.

Being able to have a private conversation with a patient who may not need a full clinical room can be addressed by the addition of a consultation-friendly pod. Larger pods provide enough room for whanau as support for the patient, and when pods are equipped with a video conferencing solution a third party (such as a specialist) can be phoned in from the convenience of the patient's local clinic.

Other concepts include utilising pods as immunisation rooms, as they are large enough to fit a nurse plus the patient and their family – ensuring a comfortable space for all without tying up a clinical room. The addition of frosted glass ensures basic privacy needs are met.

HUSH TELEHEALTH SOLUTIONS

HUSH WORK

Width:
1.6m

Height:
2.3m

Depth:
1.2m

Weight:
425kg

- For single person use
- Clinician pod or patient wellbeing pod
- One-to-one video conference
- Table and shelf included

HUSH MEET

Width:
2.15m

Height:
2.3m

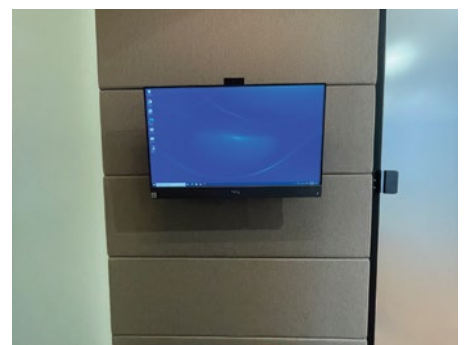

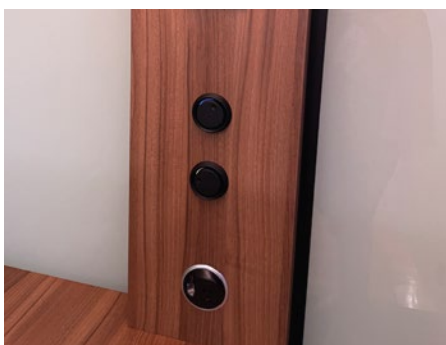

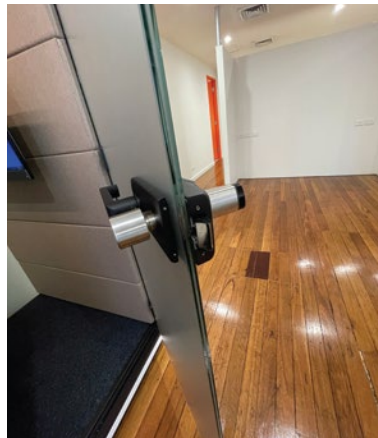

Depth:
